

For Immediate Release

Acuitec Releases iPhone Application for Critical Healthcare Settings

Provides real-time patient information - anytime, anywhere.

Birmingham, AL- December 8, 2009 - Acuitec, Inc., an innovator in integrated technologies for high-acuity healthcare, announced the release of the iPhone application for their Vigilance product. Benefiting clinicians in critical healthcare settings including the Emergency Department, Intensive Care Units and Operating Room, the release extends the power of Vigilance to one of the most widely adopted handheld electronic devices in use today.

With its customized messaging system and the use of the smart phone technologies, the application is designed such that clinical messages are easily recognizable and differentiated from standard text based messaging. The use of the smart phone app frees up the clinicians from having to carry around numerous devices – pagers, phone, hand-held computer, etc. With Vigilance for the iPhone, this is now all embedded into one device.

Vanderbilt Medical Center, Acuitec’s development partner, has successfully deployed the iPhone application at the facility and is currently used by the Anesthesia team, Intensivists and other critical care clinicians. “The use of the iPhone application has enabled me to make better use of my time, provide safer care for my patients and have all this on one simple device – my iPhone”, said Dr Paul St. Jacques, anesthesiologist at VMC.

Recently, a sneak preview of the iPhone application was presented at the American Society of Anesthesiologists conference in New Orleans in late October. It was well received and many attendees noted this was the most meaningful application developed for healthcare today. Vigilance is presently the only true critical care application that is developed to run on “smart phones”, such as the iPhone. Lionel Tehini, Acuitec CEO notes, “This technology takes the delivery of healthcare to a new level by providing clinicians with real-time patient information – anytime, anywhere. The ability to use existings technologies enables this information to be made available in the field, in a remote village, across the globe or even right there at the bedside. This delivers healthcare to wider spectrum of patients across a variety of needs.”

About Acuitec

Acuitec offers the only fully integrated, comprehensive solution designed by critical care clinicians featuring remote presence monitoring and situational awareness. Acuitec's products are designed to enhance clinical outcomes, patient care and safety, while improving care providers efficiency, regulatory compliance adherence, reimbursement and overall business value.

Acuitec focuses on providing innovative solutions in the field of high-acuity care, including perioperative, intensive care and emergency response. Acuitec's flagship products are VPIMS, an integrated clinical solution for the perioperative continuum of care, and Vigilance, a clinician customizable, rule-based remote presence monitoring solution. Our strategic relationship with Vanderbilt Medical Center (VMC), enables us to ensure our products are thoroughly tested and clinically verified through in depth due diligence and validation of all clinical algorithms.

About Vigilance

Vigilance is a remote presence monitoring and clinician decision-support application for anesthesiologists, intensivists, and other healthcare providers. Regardless of their location, with Vigilance, caregivers have instant access to vital patient information. Clinicians are able to concurrently monitor all stages of call for multiple patients in multiple care units simultaneously, including OR, ICU and ED. With clinician-defined patient monitoring, intelligent rule-based messaging with automated notification, and situational awareness, Vigilance provides remote presence monitoring wherever and whenever it's needed – anytime, anywhere.
