

## FOR IMMEDIATE RELEASE

### **Acuitec's Vigilance Product Featured in Intel's Chairman's Keynote Address at CES**

**BIRMINGHAM, AL., January 10, 2009** -- Acuitec's highly acclaimed and award winning technology, Vigilance was the key healthcare technology featured in Craig Barrett's keynote address at the Consumer Electronics Show (CES) on Friday January 9, 2009. The Vigilance product, developed in conjunction with clinicians at Vanderbilt Medical Center, enables clinical staff to remotely monitor multiple patients simultaneously while enabling the physician to customize built-in intelligent clinical messages based on the patient's condition.

In his keynote address Dr. Barrett addressed how the use of technology is helping to improve living conditions within the developing regions of the world such as Africa. He covered three main areas where technology is having a huge impact – education, healthcare and economic development. In the healthcare segment he featured Vigilance, and the trial tests currently being done in Africa, as an example of how first world healthcare is being delivered into these less fortunate regions. Through the use of Vigilance, clinicians in Africa are able to leverage their expertise across a wide area and network of patients by monitoring the health and condition of their patient in the clinics as well as within remote regions remotely. The technology is able to work with 3G or Wi-Max communication protocols. A world away, clinicians at professional institutions, like Vanderbilt, are able to remotely monitor the same patients and provide support, clinical assistance and consultation to aid the overloaded clinicians in Africa.

#### **About Acuitec**

Acuitec is a Healthcare Technology Company based in Birmingham Alabama that focuses on providing world-class solutions in the field of High-Acuity care, including perioperative, intensive care and emergency response. Their flagship products are Vigilant Perioperative Information Management Solution (VPIMS) and Vigilance remote visualization and patient monitoring solution. The VPIMS solution empowers clinicians with the vital real-time information required throughout the perioperative continuum of care; simultaneously tracking and charting events while monitoring patient data, including Pre, Intra and Post Operative Nurse Charting, Pre, Intra and Post operative Patient Management and Anesthesia Charting. Vigilance is used by clinicians, including surgeons, anesthesiologists, intensivists and hospitalists, across the hospital to monitor the condition of multiple patients simultaneously.
