

Acuitec is exhibiting at the AORN Congress in Philadelphia March 21-23. Over 5,000 perioperative nurses and nurse managers will gather to enhance their knowledge and skills and be updated on the latest in the industry's recommended practices and products.

Acuitec will be highlighting the freedom to be **efficient, caring, and informed** with Acuitec's comprehensive solution for enhancing perioperative care. This is the perfect venue to unveil Acuitec's new scheduling and preference cards solution as well as highlight the enhanced **Case management, Patient tracking and Electronic time-out** management solution.

Convenient and Concise

Acuitec introduces patient self-entry web-form

VigilantPre!, Acuitec's solution for preoperative assessment and testing, has already been recognized for its second-to-none capabilities. Comprehensive data capture is simplified and streamlined with pre-populated data entry fields and charting by exception. By confirming prepopulated information rather than repetitively answering the same questions, the patient provides more detailed, accurate data. Now featuring a web-based form for patient self-entry, VigilantPre! is even more convenient.

- Form customizable by facility/service
- Completed either at surgeon's office during initial consult or in the comfort of the patient's home/office.
- Includes patient medical history, medications, allergies, etc.
- Pre-op evaluations are prepopulated with known data

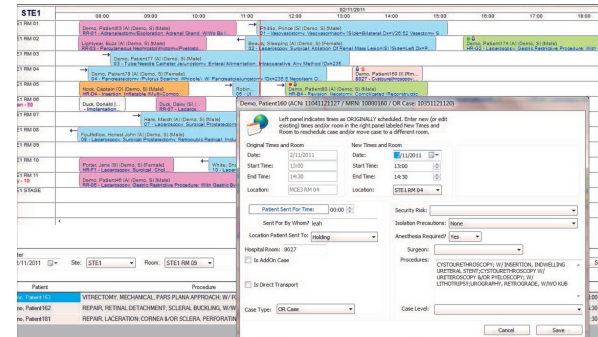

The configurable risk algorithms within VigilantPre! evaluate whether any additional follow-up is required. Follow up pre-op assessments can be done using either a workstation or the iPad app. For more information about VigilantPre!, visit <http://vigilantpre.acuitec.com/> or email info@acuitec.com.

Scheduling and Preference Cards Management

At the AORN Congress, Acuitec will unveil their latest OR resource planning and management solution to optimize operating room utilization. The solution carefully orchestrates the unique scheduling requirements of the perioperative environment, efficiently managing material usage, equipment assignment, preference cards and resource allocation. By synchronizing OR scheduling and supply management, the solution ensures just-in-time management of supplies and equipment.

Key features of the system include:

- Synchronized equipment and case tracking
- Statistical estimation of case duration
- Expiry date processing
- Preference card tracking
- Kit processing and management
- Multiple types of units of measure
- Conflict management and precedence
- Preference cards by surgeon, procedure, and service
- Schedule blocking by surgeon, service, admin, or first-come first-serve basis
- Order generation from customized library or CPT codes
- Stock count reports and inventory replenishment orders
