

For Immediate Release

Acuitec Introduces iCare: *Apps for the Anesthesia Professional*

Birmingham, AL- October 20, 2010 – Acuitec unveiled iCare, a suite of mobile apps for the anesthesia professional, at the American Society of Anesthesiologists (ASA) Annual Meeting in San Diego on Monday. iCare brings Acuitec’s solutions for optimizing high-acuity care to a clinician’s iPhone, iTouch, iPad, or other mobile devices, leveraging mobile technology to increase patient safety and clinician efficiency.

The ASA Annual Meeting is the ideal venue to premiere the iCare suite. Leading anesthesiologists gather to participate in a world-class educational program, featuring the most talented and accomplished experts in the field. iCare fits perfectly into this environment of introducing new ideas and innovations.

The development of iCare was motivated by the excellent reception of Vigilance, Acuitec’s award-winning app for remote presence monitoring and clinician decision support. Showcased by Intel Chairman Craig Barrett in the CES 2009 Keynote Address and featured in various medical publications, Vigilance is the flagship app of the iCare suite. Vigilance allows clinicians to view live operating room videos, graphical vitals, and case boards. With this information instantly at their fingertips, clinicians can remotely monitor their patients and respond more quickly in the ever-changing perioperative environment.

“iCare leverages the most advanced mobile technology of today to bring real-time information to the clinician like never before – anytime, anywhere,” says Maqbool Patel, CTO of Acuitec. “For example, with our PostOpRounds app for the iPad, clinicians can complete electronic evaluations on the go and instantaneously access case details and reports for each patient they visit.”

Acuitec will continue to expand the iCare suite, propelled by the momentum and unwired potential of leading edge technologies such as the iPad and Android. These sleek, simple devices feature high-resolution touch displays and are powered by extended battery life, bringing information portability to the clinician all day. With this technology, iCare brings an unprecedented experience of enhancing perioperative care that just feels right in your hands.

About Acuitec:

Acuitec, LLC offers a comprehensive, integrated solution for optimizing perioperative care. The innovation of Acuitec’s solution has been recognized nationally, as 2008 winner of Microsoft Healthcare User’s Group (MS-HUG) *Innovative Product of the Year Award* and 2010 winner of the Society of Technology in Anesthesia *2010 Clinical Application of Technology Award*. Acuitec is actively engaged in establishing key industry partnership and currently has a co-marketing agreement with Stryker Communications. For more information, visit <http://acuitec.com/>.
